These are examples of GOD=7_4 Theory; see

The ancients all observed the 7 moving objects in the heavens or 'sacred 7 Luminaires' known today as the '7 Classical Planets': Moon, Mercury, Venus, Sun, Mars, Jupiter, and Saturn. 4 of these can't be easily seen during the day/4 don't cast shadows on Earth. All ancient cultures tracked the 4 lunar phases of roughly 7 days (~7.4 days) each, thus 4 weeks in a 'moonth'. Lunar year + 7 day week + 4 days = solar year.

Orion is 7 stars with 4 being his shoulders and knees + Orion's Belt. The BIG Dipper & Little Dipper are both 7 stars with 4 in their bowls. The Pleiades/7 Sisters is the 4th most recognizable asterism.

Mars returns to the same point in relationship to the Sun & Earth every 47 years.
